2015-25

(In England)

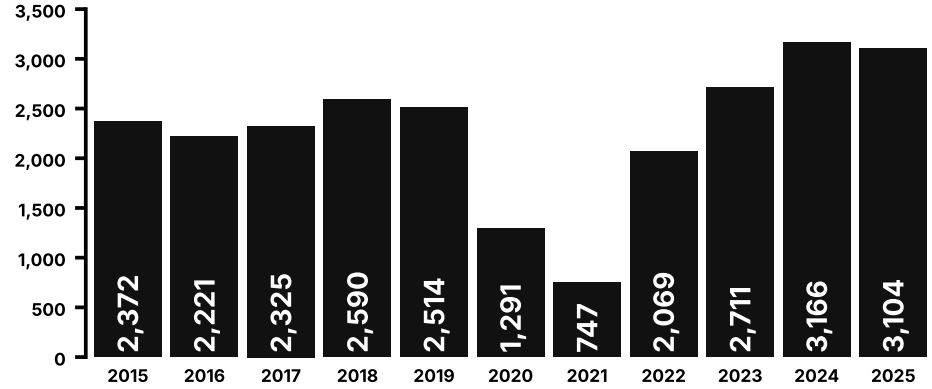

Salmonella laboratory reports (all non-typhoidal)

(2015 - 2025)

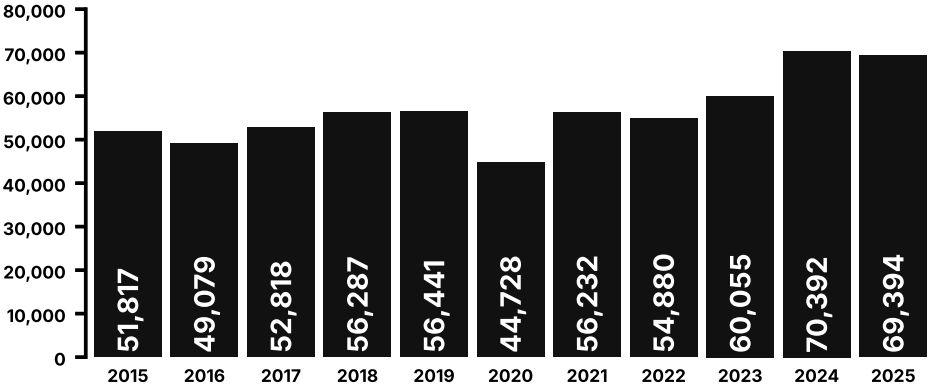

Salmonella Enteritidis laboratory reports

(2015 - 2025)

Campylobacter laboratory reports

(2015 - 2025)

Food poisoning trends: 2015-2025 update

Source: UK Health Security Agency (UKHSA), laboratory reports of non-typhoidal Salmonella and Campylobacter, England.

2015 from the 2015-2024 editions; 2016-2025 from the 2016-2025 editions (data correct as of 16 Feb 2026). Live surveillance data, so totals can change.

England only, whereas the 1996-2005 handout covered England and Wales. Figures are laboratory-confirmed reports, not clinical notifications.

2020-2021 were affected by the COVID-19 pandemic (changed testing, travel and hospitality). Recent rises are partly due to more sensitive molecular testing.
