ANSWERS

Sources and/or causes of hazards	Controls	Monitoring	Corrective action
Overflowing waste receptacles attracting pests	Suitable and sufficient waste receptacles	Regular checking of systems/procedures and waste containers	Discard contaminated food
Uncovered external waste containers attracting pests	Staff vigilance/training/supervision	Competency testing of staff/supervisors	Refresher training of staff/supervisors Improved supervision/instruction
Decomposing/maggot infested waste	Supervision (waste not allowed to accumulate).		Provision of new waste receptacle Change system to reduce amount of waste produced Increase frequency of collection
External waste storage containers wrongly sited	Site external waste areas to minimise risk of contamination to food/food equipment or staff	Audits	Resite external waste storage areas
